More space in the room.

Storage space doesn't sound sexy. Until you stand in front of Side. Our new sideboards and highboards are practical, timeless and versatile. But above all, they are smart eye-catchers. The perfect complement to Spectral's media lowboards.

Made in Germany.

Bronze & Oak Smoked

Lacquer? Veneer? Coloured glass?  
Or would you prefer Fenix®?

# 1. Side System

## Side

Side is a range furniture consisting of individual lowboards, sideboards and highboards.

The system consists of numerous elements that can be lined up. The logical grid of 25 or 50 cm steps makes planning easy. The respective surface type is mounted on the stable carcass. This allows for a high variety of surfaces.

With doors, drawers or flaps, Side is suitable for all living areas. Its wide variety of surfaces, practical options and customisation, Side can fulfil many individual wishes. The possibilities are almost unlimited.

Thanks to its timeless and purist design, Side is the perfect complement to Spectral's media lowboards. Like all Spectral furniture, Side is manufactured in Pleidelsheim, Southern Germany

## Design

Side is available in two different design variants.  
**Model 1.** Model 1 is timeless. The overflowing top plate forms the classic design. Model 1 is available in all finishes.  
**Model 2.** Model 2 is modern. The overflowing fronts and sides form the modern design language. Model 2 is available in coloured glass, metallic glass, design glass and Fenix®.

## System & grid

Different versions with doors, drawers or flaps, in ready-made combinations, for individual arrangement. Top panels and sides are included in the basic price.  
**Width grid:** 50 cm, 100 cm, 150 cm  
**Height grid:** 50 cm, 75 cm, 100 cm, 125 cm  
**Depth grid:** 38 cm, 48 cm

## Custom-made

## Body

Solid construction with 19mm wall thickness and 8mm rear wall, dowelled and glued for maximum stability. The Sand carcass surface is finely structured, particularly robust and easy to clean. Five body colours are available: Snow, grey, pebble, granite and black.

## Shelves

Sturdy 19 mm shelves in carcass colour, height adjustable, included. Additional shelves can be ordered.

## Cover plates

Top panels are included with each element. A continuous top panel can be selected for several elements. Depending on the surface, there are different maximum widths. Smart lacquer and veneer up to 275 cm. Coloured glass and metallic glass up to 350 cm. Design glass and Fenix® up to 300 cm.

## Mechanics & function

Damped hinges, soft-close drawer mechanism and flap dampers of the highest quality.

## Installation types

**Standard:** Base plinth, wall mounting, edge and stick feet are included in the basic price.  
**Foot frames:** Bridge, blade and frame are optional.  
Base colour is black.  
For stick foot - black or brushed aluminium.  
All feet and bases can also be optionally lacquered in the colour of your choice.

## Room divider

Side can also be placed freely in the room. In this case, the surface is also mounted on the back. The rear side is fully covered for each element.

## Lighting

Indirect LED lighting on the rear edge of the furniture. The LED strips can be individually planned at the top, bottom or sides. Open elements can also be illuminated on the inside. The LED lighting is dimmable and can be operated via remote control or app. Light colour is warm white [3200 Kelvin].

## Cable management

A cable aperture can be selected at the rear edge of the top panel; the aperture is elegantly concealed with a brush. In addition, a cable opening can be selected in the carcass and in the rear wall.

## Surfaces

**Smart Lack.** Smart Lack is a particularly high-quality lacquer finish. It consists of several layers. The top layer is a soft-touch surface and has an anti-fingerprint effect. Smart Lack is more scratch-resistant and light-fast than conventional lacquers. The edges are applied separately using a laser process and are shock-resistant.

**Colour glass.** Colour glass consists of a 4 mm safety glass panel. The lacquer is applied to the underside. The glass surface is very hard, scratch-resistant and easy to clean. There is a choice of 5 basic colours and over 2000 custom colours. These can be selected according to NCS or Sikkens 5051 colour guides [RAL colours on request]. The glass surface can be chosen glossy or satin [matt].

**Metallic glass.** Metallic glass has the same properties as Colour glass, but with 6 chic metallic colours. The glass surface can be chosen glossy or satin [matt].

**Design glass.** Design glass consists of a 4 mm safety glass panel. A high-resolution digital print is applied to the underside. The surface is brilliant and visually indistinguishable from a natural motif. Design glass is very hard, scratch-resistant and easy to clean. Design glass is only 4 mm thin and therefore appears light and elegant. The glass surface can be chosen glossy or satin [matt]. Satin-finished glass renders the motif blurred, but thus appears discreet and restrained.  
**Design glass is only available for top panels.**

**Veneer.** Our veneers are made of real wood. The surface is brushed and sealed with a matt natural wood varnish. This makes the wood surfaces easy to clean and insensitive. There are 4 wood tones to choose from. Natural oak, American walnut, smoked oak and black oak. The veneer direction can be selected vertically or horizontally.

**Fenix®.** Fenix® is an extremely matt nanotech material, the surface is particularly elegant and has a velvety touch. It is also resistant to fingerprints. We process Fenix® in the elegant 4 mm thickness. This allows for a particularly light and filigree design language. Fenix® is available in 6 harmonious colours.

## Price groups

The surfaces are divided into three price groups.  
**Price group 1:** Smart lacquer  
**Price group 2:** Colour Glass and Metallic Glass  
**Price group 3:** Veneer, Fenix® and Design Glass

# 5. side colours & surfaces

## Smart Lack - matt, soft touch & anti fingerprint
